

# ONE-WAY PALLETS DATA SHEET

Disposable pallets, also known as one-way pallets, are the ideal choice for companies looking for cost-effective and convenient solutions for single-use transport of goods. Made predominantly from lightweight materials such as recycled wood and wood waste, these pallets are designed to be used without subsequent return, making them particularly suitable for international deliveries and export operations where pallet return can be logistically challenging and uneconomical. With their low production costs and ease of handling, disposable pallets are becoming an important element in supply chains, offering a practical solution

for transporting a wide range of goods. These pallets help to reduce overall shipping and packaging costs, minimising the need to manage returns and enabling simpler and more efficient logistics. They are particularly valued in industries that require disposable or low-cost packaging solutions for safe and efficient product delivery.

## AVAILABLE TYPES

SKU	LENGTH	WIDTH	HEIGHT	WEIGHT	SAFE LOAD	CONDITION
001.901	600 MM	800 MM	145 MM	±14 KG	500 KG	NEW
001.902	800 MM	1200 MM	145 MM	±20 KG	700 KG	NEW
001.903	1000 MM	1200 MM	145 MM	±23 KG	900 KG	NEW
001.904	1200 MM	1200 MM	145 MM	±28 KG	1200 KG	NEW

## FEATURES

### VARIETY OF SIZES

Disposable pallets are available in a wide range of sizes, allowing companies to select the perfect fit for specific shipments, ensuring the most efficient use of available cargo space. This flexibility in size selection makes disposable pallets a versatile solution for a variety of logistical needs, from small consignments to large items.

### ISPM15 TREATED

The treatment of disposable pallets in accordance with the international standard ISPM15 is a key aspect to ensure their safe use in international trade. This standard prescribes heat treatment or fumigation of wood to prevent the spread of pests and plant diseases across country borders.

### HYDROPHOBIC TREATMENT

On special customer request, disposable pallets can be additionally treated with a hydrophobic coating. This coating prevents the absorption of moisture, protecting the pallets from deformation, mould and fungus growth. This treatment is particularly valuable for transport or storage in high humidity environments.
